

Forecasting the Price of Zinc

Commodity	Zinc (London Metal Exchange)
Forecast Period	May 2017 – October 2017
Currency	£
Unit	Metric Tonne
Observations	Monthly forecasts of the monthly average price

Forecasts

Month/Year	Forecast	Prob. of Raise
May 2017	2269£	50 %
Jun. 2017	2145£	42 %
Jul. 2017	2392£	51 %
Aug. 2017	2449£	56 %
Sep. 2017	1916£	47 %
Oct. 2017	1859£	47 %

Suggested Action for Procurement

Purchase Limit Month	Suggested Action
May 2017	Buy in April at 2221£
June 2017	Buy part of requirements
July 2017	Buy part of requirements
August 2017	Buy part of requirements
September 2017	Buy part of requirements
October 2017	Buy part of requirements

Forecasting the Price of Zinc

Impact Analysis: One Month Forecast

Our algorithm forecasts a higher price of Zinc in one month: it is expectable that the price increases 2.14% from 2221£ to 2269£ until the beginning of May.

Indices of Factors

Interpretation

- **Considerable decrease of Supply:** Positive pressure of the Supply index
- **Decrease of Demand:** Negative pressure of the Demand index
- Positive pressure of the index of Zinc
- Positive pressure of the index of variables representing the market upstream
- Positive pressure of the index of variables representing the market downstream
- Slightly positive pressure of the financial index
- Positive pressure of other commodities and other factors
- Focus on Finland, Euro, and China

Impact per Country

Forecasting the Price of Zinc

Impact Analysis: Two Months Forecast

Our algorithm forecasts a lower price of Zinc in two months: it is expectable that the price decreases 3.41% from 2221£ to 2145£ until the beginning of June.

Indices of Factors

Interpretation

- **Considerable increase of Supply:** Negative pressure of the Supply index
- **Considerable increase of Demand:** Positive pressure of the Demand index
- Slightly positive pressure of the index of Zinc
- **Considerably negative pressure of the index of variables representing the market upstream**
- Negative pressure of the index of variables representing the market downstream
- Slightly positive pressure of the financial index
- Negative pressure of other commodities and other factors
- Focus on Finland, Euro, and Mexico

Impact per Country

Forecasting the Price of Zinc

Impact Analysis: Three Months Forecast

Our algorithm forecasts a higher price of Zinc in three months: it is expectable that the price increases 7.69% from 2221£ to 2392£ until the beginning of July.

Indices of Factors

Interpretation

- **Considerable decrease of Supply:** Positive pressure of the Supply index
- **Considerable increase of Demand:** Positive pressure of the Demand index
- **Considerably positive pressure of the index of Zinc**
- **Considerably negative pressure of the index of variables representing the market upstream**
- Slightly negative pressure of the index of variables representing the market downstream
- Positive pressure of the financial index
- Negative pressure of other commodities and other factors
- Focus on Finland, Euro, and Mexico

Impact per Country

Forecasting the Price of Zinc

Impact Analysis: Four Months Forecast

Our algorithm forecasts a higher price of Zinc in four months: it is expectable that the price increases 10.25% from 2221£ to 2449£ until the beginning of August.

Indices of Factors

Interpretation

- **Considerable increase of Supply:** Negative pressure of the Supply index
- **Considerable increase of Demand:** Positive pressure of the Demand index
- **Considerably positive pressure of the index of Zinc**
- **Considerably positive pressure of the index of variables representing the market upstream**
- Slightly positive pressure of the index of variables representing the market downstream
- Slightly positive pressure of the financial index
- Slightly negative pressure of other commodities and other factors
- Focus on Finland, Euro, and US

Impact per Country

Forecasting the Price of Zinc

Impact Analysis: Five Months Forecast

Our algorithm forecasts a lower price of Zinc in five months: it is expectable that the price decreases 13.75% from 2221£ to 1916£ until the beginning of September.

Indices of Factors

Interpretation

- **Considerable increase of Supply:** Negative pressure of the Supply index
- **Considerable increase of Demand:** Positive pressure of the Demand index
- **Considerably positive pressure of the index of Zinc**
- Slightly negative pressure of the index of variables representing the market upstream
- Slightly negative pressure of the index of variables representing the market downstream
- **Considerably negative pressure of the financial index**
- **Considerably negative pressure of other commodities and other factors**
- Focus on Finland, Euro, and China

Impact per Country

Forecasting the Price of Zinc

Impact Analysis: Six Months Forecast

Our algorithm forecasts a lower price of Zinc in six months: it is expectable that the price decreases 16.30% from 2221£ to 1859£ until the beginning of October.

Indices of Factors

Interpretation

- **Considerable increase of Supply:** Negative pressure of the Supply index
- **Considerable increase of Demand:** Positive pressure of the Demand index
- Slightly positive pressure of the index of Zinc
- Slightly negative pressure of the index of variables representing the market upstream
- Slightly negative pressure of the index of variables representing the market downstream
- **Considerably negative pressure of the financial index**
- **Considerably negative pressure of other commodities and other factors**
- Focus on Finland, Euro, and China

Impact per Country

Forecasting the Price of Zinc

APPENDIX – Technical Explanation of the Impact Analysis

In this appendix, we explain the impact analysis of the factors that most contribute for our forecasts.

This Impact Analysis is conducted individually for **each time horizon**, allowing for a distinction between the indices of variables that contribute for our forecasts at short and medium run.

For each time horizon, our analysis has **two components**: first, we present the impact of variables grouped by **indices of factors**; second we present the impact of variables grouped by **indices of countries**.

Indices of Factors

Indices of factors are indices of the weighted contributions of the variables grouped in those factors.

Supply Index: composed of macroeconomic variables of the producing and exporting countries. It includes variables such as production, exchange rates, inflation, monetary policy, and wages. For example, an increase in wages implies higher production costs which should (in linear, general, and ceteris paribus terms) generate an incentive to increase prices;

Demand index: composed of macroeconomic variables of the consuming and importing countries. It includes variables such as production, exchange rates, inflation, monetary policy, and wages. For example, a decrease in a consumer confidence index should (in linear, general, and ceteris paribus terms) increase savings and decrease demand, leading to lower prices;

Zinc Index: composed of variables related to Zinc. It includes variables such as the price of Zinc in different regions of the world and exports, imports, and producer prices of Zinc in some countries. For example, an increase in the price of Zinc in other region may imply an increase in the price of Zinc in Europe due to arbitrage movements;

Upstream index: composed of variables related to Coal and Zinc Ore. It includes variables such as the price and exports, imports, and producer prices of the inputs in some countries. For example, an increase in the price of Coal should (in linear, general, and ceteris paribus terms) generate an increase in the price of Zinc;

Forecasting the Price of Zinc

APPENDIX – Technical Explanation of the Impact Analysis (II)

Downstream index: composed of variables related to downstream industries, such as Construction. It includes variables such as the exports, imports, and producer prices of the Construction Industry in some countries. For example, an increase in the demand for Construction should (in linear, general, and ceteris paribus terms) generate an increase in the price of Zinc;

Financial Variables Index: composed of financial market variables. It includes the share price of companies that produce Zinc. It also includes financial indices related to this sector. For example, a positive change in the share price of a producer of Zinc should (in linear, general, and ceteris paribus terms) imply an increase in expected profitability of the firm. This may signal an expectation of increase in the price of Zinc;

Other Variables Index: composed of variables related to other metals (Aluminium and Copper) and Oil. It includes the price, exports, and imports of these commodities. For example, a positive change in the price of a substitute commodity, should (in linear, general, and ceteris paribus terms) imply an increase of demand of Zinc, and thus, of the price of Zinc.

Indices of Countries

Indices of Countries: are indices of the weighted contributions of the macroeconomic variables of each country. The countries we present are the most relevant countries in the production, consumption, and international commerce of Zinc.

Interpretation Warning

It is important to note that the contribution of individual variables and indices of variables is not linear. The interaction between variables and between variables of different factors may not be neglectable, which means that the importance of each variable and indices of variables is determined together with the importance of all other variables.

Furthermore, the analysis of changes in variables is not linear. This means that the same variable with the same change in different moments of time may have different impacts given its previous evolution. For example, the algorithm contrasts the change in a variable with its expected change. A positive change but inferior to the expected change may originate an effect of price correction.
