

Forecasting the Price of Ethylene

Commodity	Ethylene (Spot FD NW Europe)
Forecast Period	September 2017 – February 2018
Currency	£
Unit	Metric Tonne
Observations	Monthly forecasts of the spot price in the first day of the month

Forecasts

Month/Year	Forecast	Prob. of Raise
Sep. 2017	862£	50 %
Oct. 2017	788£	47 %
Nov. 2017	754£	41 %
Dec. 2017	741£	48 %
Jan. 2018	988£	75 %
Feb. 2018	982£	54 %

Suggested Action for Procurement

Purchase Limit Month	Suggested Action
September 2017	Buy in August at 837£
October 2017	Buy part of requirements
November 2017	Wait
December 2017	Wait
January 2018	Buy part of requirements
February 2018	Buy part of requirements

Forecasting the Price of Ethylene

Impact Analysis: One Month Forecast

Our algorithm forecasts a higher price of Ethylene in one month: it is expectable that the price increases 3.04% from 837£ to 862£ until the beginning of September.

Indices of Factors

Interpretation

- **Decrease of Supply:** Positive pressure of the Supply index
- **Increase of Demand:** Positive pressure of the Demand index
- Positive pressure of the index of Ethylene
- Positive pressure of the index of variables representing the market upstream
- Negative pressure of the index of variables representing the market downstream
- Slightly negative pressure of the financial index
- Positive pressure of other commodities and other factors
- Focus on Belgium, France, and Canada

Impact per Country

Forecasting the Price of Ethylene

Impact Analysis: Two Months Forecast

Our algorithm forecasts a lower price of Ethylene in two months: it is expectable that the price decreases 5.89% from 837£ to 788£ until the beginning of October.

Indices of Factors

Interpretation

- **Decrease of Supply:** Positive pressure of the Supply index
- **Decrease of Demand:** Negative pressure of the Demand index
- Positive pressure of the index of Ethylene
- Slightly positive pressure of the index of variables representing the market upstream
- **Considerably negative pressure of the index of variables representing the market downstream**
- Negative pressure of the financial index
- **Considerably negative pressure of other commodities and other factors**
- Focus on UAE, China, and US

Impact per Country

Forecasting the Price of Ethylene

Impact Analysis: Three Months Forecast

Our algorithm forecasts a lower price of Ethylene in three months: it is expectable that the price decreases 9.87% from 837£ to 754£ until the beginning of November.

Indices of Factors

Interpretation

- **Decrease of Supply:** Positive pressure of the Supply index
- **Decrease of Demand:** Negative pressure of the Demand index
- Positive pressure of the index of Ethylene
- Negative pressure of the index of variables representing the market upstream
- **Considerably negative pressure of the index of variables representing the market downstream**
- Negative pressure of the financial index
- **Considerably negative pressure of other commodities and other factors**
- Focus on UAE, Japan, and Belgium

Impact per Country

Forecasting the Price of Ethylene

Impact Analysis: Four Months Forecast

Our algorithm forecasts a lower price of Ethylene in four months: it is expectable that the price decreases 11.52% from 837£ to 741£ until the beginning of December.

Indices of Factors

Interpretation

- **Increase of Supply:** Negative pressure of the Supply index
- **Considerable decrease of Demand:** Negative pressure of the Demand index
- Positive pressure of the index of Ethylene
- **Considerably negative pressure of the index of variables representing the market upstream**
- **Considerably negative pressure of the index of variables representing the market downstream**
- Slightly positive pressure of the financial index
- Negative pressure of other commodities and other factors
- Focus on UAE, Japan, and US

Impact per Country

Forecasting the Price of Ethylene

Impact Analysis: Five Months Forecast

Our algorithm forecasts a higher price of Ethylene in five months: it is expectable that the price increases 17.98% from 837£ to 988£ until the beginning of January.

Indices of Factors

Interpretation

- **Considerable decrease of Supply:** Positive pressure of the Supply index
- **Increase of Demand:** Positive pressure of the Demand index
- **Considerably positive pressure of the index of Ethylene**
- Positive pressure of the index of variables representing the market upstream
- Slightly negative pressure of the index of variables representing the market downstream
- **Considerably positive pressure of the financial index**
- Positive pressure of other commodities and other factors
- Focus on UAE, UK, and US

Impact per Country

Forecasting the Price of Ethylene

Impact Analysis: Six Months Forecast

Our algorithm forecasts a higher price of Ethylene in six months: it is expectable that the price increases 17.31% from 837£ to 982£ until the beginning of February.

Indices of Factors

Interpretation

- **Considerable decrease of Supply:** Positive pressure of the Supply index
- **Decrease of Demand:** Negative pressure of the Demand index
- **Considerably positive pressure of the index of Ethylene**
- Negative pressure of the index of variables representing the market upstream
- Slightly negative pressure of the index of variables representing the market downstream
- **Considerably positive pressure of the financial index**
- Positive pressure of other commodities and other factors
- Focus on UAE, UK, and US

Impact per Country

Forecasting the Price of Ethylene

APPENDIX – Technical Explanation of the Impact Analysis

In this appendix, we explain the impact analysis of the factors that most contribute for our forecasts.

This Impact Analysis is conducted individually for **each time horizon**, allowing for a distinction between the indices of variables that contribute for our forecasts at short and medium run.

For each time horizon, our analysis has **two components**: first, we present the impact of variables grouped by **indices of factors**; second we present the impact of variables grouped by **indices of countries**.

Indices of Factors

Indices of factors are indices of the weighted contributions of the variables grouped in those factors.

Supply Index: composed of macroeconomic variables of the producing and exporting countries. It includes variables such as production, exchange rates, inflation, monetary policy, and wages. For example, an increase in wages implies higher production costs which should (in linear, general, and ceteris paribus terms) generate an incentive to increase prices;

Demand index: composed of macroeconomic variables of the consuming and importing countries. It includes variables such as production, exchange rates, inflation, monetary policy, and wages. For example, a decrease in a consumer confidence index should (in linear, general, and ceteris paribus terms) increase savings and decrease demand, leading to lower prices;

Ethylene Index: composed of variables related to Ethylene. It includes variables such as the price of Ethylene in different regions of the world and exports, imports, and producer prices of Ethylene in some countries. For example, an increase in the price of Ethylene in other region may imply an increase in the price of Ethylene in Europe due to arbitrage movements;

Upstream index: composed of variables related to Ethane and Propane. It includes variables such as the price and exports, imports, and producer prices of the inputs in some countries. For example, an increase in the price of Ethane should (in linear, general, and ceteris paribus terms) generate an increase in the price of Ethylene;

Forecasting the Price of Ethylene

APPENDIX – Technical Explanation of the Impact Analysis (II)

Downstream index: composed of variables related to Polyethylene and downstream industries, such as Packaging. It includes variables such as the exports, imports, and producer prices of the Plastic Industry in some countries. For example, an increase in the demand of Plastic should (in linear, general, and ceteris paribus terms) generate an increase in the price of Ethylene;

Financial Variables Index: composed of financial market variables. It includes the share price of companies that produce Ethylene. It also includes financial indices related to this sector. For example, a positive change in the share price of a producer of Ethylene should (in linear, general, and ceteris paribus terms) imply an increase in expected profitability of the firm. This may signal an expectation of increase in the price of Ethylene;

Other Variables Index: composed of variables related to other monomer and other commodities, such as Oil. It includes the price, exports, and imports of these commodities. For example, a positive change in the price of a substitute commodity, should (in linear, general, and ceteris paribus terms) imply an increase of demand of Ethylene, and thus, of the price of Ethylene.

Indices of Countries

Indices of Countries: are indices of the weighted contributions of the macroeconomic variables of each country. The countries we present are the most relevant countries in the production, consumption, and international commerce of Ethylene.

Interpretation Warning

It is important to note that the contribution of individual variables and indices of variables is not linear. The interaction between variables and between variables of different factors may not be neglectable, which means that the importance of each variable and indices of variables is determined together with the importance of all other variables.

Furthermore, the analysis of changes in variables is not linear. This means that the same variable with the same change in different moments of time may have different impacts given its previous evolution. For example, the algorithm contrasts the change in a variable with its expected change. A positive change but inferior to the expected change may originate an effect of price correction.
