

# Forecasting the Price of PVC

<b>Commodity</b>	PVC (Spot FOB NW Europe)
<b>Forecast Period</b>	June 2017 – November 2017
<b>Currency</b>	€
<b>Unit</b>	Metric Tonne
<b>Observations</b>	Monthly forecasts of the spot price in the first day of the month

## Forecasts

Month/Year	Forecast	Prob. of Raise
Jun. 2017	881€	38 %
Jul. 2017	837€	18 %
Aug. 2017	813€	14 %
Sep. 2017	809€	29 %
Oct. 2017	792€	27 %
Nov. 2017	763€	35 %

## Suggested Action for Procurement

Purchase Limit Month	Suggested Action
June 2017	Buy in June
July 2017	Wait
August 2017	Wait
September 2017	Wait
October 2017	Wait
November 2017	Wait

# Forecasting the Price of PVC

## Impact Analysis: One Month Forecast

Our algorithm forecasts a lower price of PVC in one month: it is expectable that the price decreases 3.39% from 912€ to 881€ until the beginning of June.

## Indices of Factors

### Interpretation

- Slight increase of Supply: Negative pressure of the Supply index
- **Increase of Demand:** Positive pressure of the Demand index
- **Considerably negative pressure of the index of PVC**
- Negative pressure of the index of variables representing the market upstream
- Negative pressure of the index of variables representing the market downstream
- Slightly negative pressure of the financial index
- Negative pressure of other commodities and other factors
- Focus on South Korea, China, and Mexico

### Impact per Country

Disclaimer: This document was made for commercial purposes. All the contents of this document should be of the reader's consideration, so that none of the suggested actions represent incentives to act. Watson & Noble does not take responsibility for actions based on this document.

# Forecasting the Price of PVC

## Impact Analysis: Two Months Forecast

Our algorithm forecasts a lower price of PVC in two months: it is expectable that the price decreases 8.24% from 912€ to 837€ until the beginning of July.

## Indices of Factors

### Interpretation

- **Increase of Supply:** Negative pressure of the Supply index
- **Increase of Demand:** Positive pressure of the Demand index
- **Considerably negative pressure of the index of PVC**
- Negative pressure of the index of variables representing the market upstream
- Negative pressure of the index of variables representing the market downstream
- Slightly negative pressure of the financial index
- Negative pressure of other commodities and other factors
- Focus on China, Japan, and South Korea

### Impact per Country

# Forecasting the Price of PVC

## Impact Analysis: Three Months Forecast

Our algorithm forecasts a lower price of PVC in three months: it is expectable that the price decreases 10.85% from 912€ to 813€ until the beginning of August.

## Indices of Factors

### Interpretation

- **Increase of Supply:** Negative pressure of the Supply index
- Slight increase of Demand: Positive pressure of the Demand index
- **Considerably negative pressure of the index of PVC**
- Negative pressure of the index of variables representing the market upstream
- Negative pressure of the index of variables representing the market downstream
- Slightly positive pressure of the financial index
- Negative pressure of other commodities and other factors
- Focus on China, US, and Japan

### Impact per Country

# Forecasting the Price of PVC

## Impact Analysis: Four Months Forecast

Our algorithm forecasts a lower price of PVC in four months: it is expectable that the price decreases 11.30% from 912€ to 809€ until the beginning of September.

## Indices of Factors

### Interpretation

- Slight decrease of Supply: Positive pressure of the Supply index
- **Decrease of Demand:** Negative pressure of the Demand index
- **Considerably negative pressure of the index of PVC**
- **Considerably negative pressure of the index of variables representing the market upstream**
- Negative pressure of the index of variables representing the market downstream
- Slightly positive pressure of the financial index
- Negative pressure of other commodities and other factors
- Focus on China, US, and Italy

### Impact per Country

# Forecasting the Price of PVC

## Impact Analysis: Five Months Forecast

Our algorithm forecasts a lower price of PVC in five months: it is expectable that the price decreases 13.13% from 912€ to 792€ until the beginning of October.

## Indices of Factors

### Interpretation

- **Increase of Supply:** Negative pressure of the Supply index
- Slight decrease of Demand: Negative pressure of the Demand index
- **Considerably negative pressure of the index of PVC**
- **Considerably negative pressure of the index of variables representing the market upstream**
- Slightly negative pressure of the index of variables representing the market downstream
- Slightly positive pressure of the financial index
- **Considerably negative pressure of other commodities and other factors**
- Focus on Japan, China, and Canada

### Impact per Country

# Forecasting the Price of PVC

## Impact Analysis: Six Months Forecast

Our algorithm forecasts a lower price of PVC in six months: it is expectable that the price decreases 16.34% from 912€ to 763€ until the beginning of November.

## Indices of Factors

### Interpretation

- Slight increase of Supply: Negative pressure of the Supply index
- Slight decrease of Demand: Negative pressure of the Demand index
- **Considerably negative pressure of the index of PVC**
- **Considerably negative pressure of the index of variables representing the market upstream**
- Negative pressure of the index of variables representing the market downstream
- Slightly positive pressure of the financial index
- **Considerably negative pressure of other commodities and other factors**
- Focus on US, Japan, and China

### Impact per Country

# Forecasting the Price of PVC

## APPENDIX – Technical Explanation of the Impact Analysis

In this appendix, we explain the impact analysis of the factors that most contribute for our forecasts.

This Impact Analysis is conducted individually for **each time horizon**, allowing for a distinction between the indices of variables that contribute for our forecasts at short and medium run.

For each time horizon, our analysis has **two components**: first, we present the impact of variables grouped by **indices of factors**; second we present the impact of variables grouped by **indices of countries**.

### Indices of Factors

**Indices of factors** are indices of the weighted contributions of the variables grouped in those factors.

**Supply Index**: composed of macroeconomic variables of the producing and exporting countries. It includes variables such as production, exchange rates, inflation, monetary policy, and wages. For example, an increase in wages implies higher production costs which should (in linear, general, and ceteris paribus terms) generate an incentive to increase prices;

**Demand index**: composed of macroeconomic variables of the consuming and importing countries. It includes variables such as production, exchange rates, inflation, monetary policy, and wages. For example, a decrease in a consumer confidence index should (in linear, general, and ceteris paribus terms) increase savings and decrease demand, leading to lower prices;

**PVC Index**: composed of variables related to PVC. It includes variables such as the price of PVC in different regions of the world and exports, imports, and producer prices of PVC in some countries. For example, an increase in the price of PVC in other region may imply an increase in the price of PVC in Europe due to arbitrage movements;

**Upstream index**: composed of variables related to Ethylene, VCM, and Caustic Soda. It includes variables such as the price and exports, imports, and producer prices of the inputs in some countries. For example, an increase in the price of Ethylene should (in linear, general, and ceteris paribus terms) generate an increase in the price of PVC;

# Forecasting the Price of PVC

## APPENDIX – Technical Explanation of the Impact Analysis (II)

**Downstream index:** composed of variables related to downstream industries, such as Construction and Packaging. It includes the exports, imports, and producer prices of the Plastic Industry in some countries. For example, an increase in the demand of these industries should (in linear, general, and ceteris paribus terms) generate an increase in the price of PVC;

**Financial Variables Index:** composed of financial market variables. It includes the share price of companies that produce PVC. It also includes financial indices related to this sector. For example, a positive change in the share price of a producer of PVC should (in linear, general, and ceteris paribus terms) imply an increase in expected profitability of the firm. This may signal an expectation of increase in the price of PVC;

**Other Variables Index:** composed of variables related to other polymers and other commodities, such as Oil, metals, and other polymers. It includes the price, exports, and imports of these commodities. For example, a positive change in the price of a substitute commodity, should (in linear, general, and ceteris paribus terms) imply an increase of demand of PVC, and thus, of the price of PVC.

## Indices of Countries

**Indices of Countries:** are indices of the weighted contributions of the macroeconomic variables of each country. The countries we present are the most relevant countries in the production, consumption, and international commerce of PVC.

## Interpretation Warning

It is important to note that the contribution of individual variables and indices of variables is not linear. The interaction between variables and between variables of different factors may not be neglectable, which means that the importance of each variable and indices of variables is determined together with the importance of all other variables.

Furthermore, the analysis of changes in variables is not linear. This means that the same variable with the same change in different moments of time may have different impacts given its previous evolution. For example, the algorithm contrasts the change in a variable with its expected change. A positive change but inferior to the expected change may originate an effect of price correction.
